Technical Description Reflection

I believe that my Technical Description writing piece displays an improvement in writing over my Lab Report, it is more polished and finished product involving me spending more time reviewing and rewriting my work. I believe that I would deserve a 93 outright, but as a result of me inefficiently spending too much time making sure that I was happy with my many small details I submitted my work 21 hours late which in accordance with the syllabus bring my grade down to an 88. This however did teach me the lesson of making sure that I dont get too caught up in the small details and to make sure I stay aligned with my broader plan of completing a writing project.

In terms of the structure and format of the report, I made sure to include all the necessary sections such as the table of contents, definition, overview, components, explanation, conclusion, and references along with visuals. I also ensured that the language used was formal and professional, as the intended audience was professionals in the watch industry or consumers looking to make an informed purchase. Throughout the writing process, I made sure to be concise and avoid including unnecessary information. This helped to increase the clarity of the report and ensured that the reader was not overwhelmed by excessive details. Additionally, I made sure to use proper citations for any external sources used in the report. I am particularly happy with the way the conclusion ended up as I spent a lot of my “extra” time making sure I got down all the research I could.

There were flaws however that in retrospect I could have addressed if I had been more careful. For instance I believe that I should have included more numerous and varied visuals and figures throughout the entirety of the piece. In fact, coming up with ideas with what visuals would be pertinent to include was one of the biggest things I struggled with in the process of writing. I was worried that I might include too many redundant figures and diagrams so I aired on the side of keeping the total amount low, a decision I regretted as soon as I submitted.
